IST 263 Project Milestone 2 – Copy Document

Note: In the "actual page text" section I am expecting you to write every bit of text that will appear on the page. If you write an outline or samples you should expect to receive a 0/10 on this assignment.

Name: William Higgins

Description (From Milestone 1):
For my website project I want to create a sort of general "wiki" for the things that I might have to do often and I do not want to keep looking them up. For example, the home page would include a short description that states that the website is supposed to be used as a guide. It would have links to other pages that would contain the specific guides on them. The links will be organized into different categories (Such as "Software", "Video Games", and maybe something like "Car Advice"). On these linked pages, it would have a single guide for whatever topic I choose, with the main header being the title of the guide and somewhere underneath there would be a subtitle for the category and a link back to the main page.

Home Page

Short Description

The Home page will be a landing page for the website and it will contain a short description of the purpose of the website(To serve as a general kind of wiki). On the page, it will have teaser elements (like boxes with pictures you can click on) which will lead the user to the other web pages that have the actual information.

Actual Page Text

Welcome everyone! This website servers as a repository / wiki for random facts that are useful from time to time that are pretty easy to forget. This website is divided into two different categories at the moment, automotive/home-care and software.

##On the top left of the page, I want to have a menu Icon that when clicked will expand onto the left side of the screen all the topics you can click. On that bar, I want to have the main topics on that page and possible the subtopics underneath them in another collapsible element.

Teaser element Automotive/home-care

#Will contain an image of a car or something similar

Click here to learn some car / household facts that you may not know, such as how to restart your garbage disposable when it stops working.

Page 2

Title: Automotive / home-care

Short Description

This page will contain facts on cars and household maintenance facts that took me a while to figure out or things that I think might be helpful. This page will have a menu icon in the top left which will create a drop down list on the left side of the screen. It will contain links to the start of each article, so the user does not need to scroll all the way down.

Actual Page Text

Garbage disposal tips

Have you ever been using your garbage disposal and have it randomly stop working? You flick the switch and nothing happens but you are sure that it didn't break and that it is still has power? This tip might help you. On some models of garbage disposals there is this little red button either underneath the unit **Insert pic here** or on the backside of the unit. When it is not working, you can try to press that button in and it should start up again.

If the garbage disposal is not working properly but you can hear it making a faint sort of sound, make sure that nothing is stuck inside of it. Turn the garbage disposal off and then check for any spoons or bits of plastic that could stop it from running properly. Once you have removed those obstructions, you can turn the unit back on and use it like normal.

Cold weather car tips

When living in a snowy place that uses salt for the roads, make sure that you go to a car wash every once and a while (and select the undercarriage wash option) in order to clear off some of the salt build up on your car. This will help prevent the car from rusting from all the salt water that is sitting on your car.

Important note: If your car was originally from a hotter state, be careful when exiting a car wash in cold temperatures. The glass may break if it cools down too fast since the glass is not used to the temperature differences.

Page 3

Title: Software tips

Short Description

This page will contain tips on software that I found out that help me out from time to time. This will range from coding to playing video games to anything else electronic related. This page will have a menu icon in the top left which will create a drop down list on the left side of the screen. It will contain links to the start of each article, so the user does not need to scroll all the way down.

VS code tips

When you are writing a lot of lines of code that are similar and you need to keep copy pasting them, you can use this shortcut. Shift + Alt + Down arrow key will copy the line of code that your text cursor is on and will copy it down. This is particularly usefully when you need to write the same thing again and again but only change a little bit of the code, like writing tables in HTML.

Compressing files with 7.zip

Tired of waiting forever when zipping up or unzipping files or folders in Windows? They you should try 7.zip. It is an open source software that is much, much faster then the default windows file compressor. It also is needed to unzip any files that you download that has the ..7z file extension.

Faster file searching with Everything

If you often using the search feature in file explorer then you know how long it takes for it to actually find the files you are looking for in medium-large folders. Sometimes it can take minutes to find a particular file that installed somewhere weird and you now trying to find it. With the file search engine Everything (which can be found at voidtools.com), it takes less then a second to find any file on your system. Everything can search through every single file on your computer system and return your results in a second.
